Professional Summary

Software Engineering Technology student at Centennial College with hands-on experience building full-stack applications using React, Node.js, Express, MongoDB, C#, SQL, Linux, and JavaScript. Strong foundation in software engineering principles including SDLC, Agile workflows, requirements engineering, database systems, and scalable application architecture. Currently developing and deploying real-world systems including StudyZone, a MERN-based educational platform featuring authentication, custom quiz systems, bulk parsing, matrix-based question engines, reusable component architecture, and leaderboard systems. Combines technical growth with strong communication, client-facing experience, and analytical problem-solving developed through years in the mortgage and real estate industries.

Technical Skills

- **Languages:** JavaScript, C#, Python, SQL, HTML/CSS, Bash, Java
- **Frontend:** React, Vite, Context API, Responsive UI Design
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication
- **Database:** MongoDB, Oracle SQL
- **Tools:** Git, Linux, VS Code, Postman, Render
- **Concepts:** SDLC, Agile, UML, Requirements Engineering, Data Structures & Algorithms

Projects

StudyZone — Full-Stack MERN Platform

- Developed and deployed a full-stack educational platform using MongoDB, Express, React, and Node.js.
- Implemented JWT authentication, quiz creation systems, question pools, and leaderboard functionality.
- Built advanced custom question systems including drag-and-drop and matrix-based question engines.
- Designed reusable React component architecture and scalable backend data models.
- Created bulk-import parsing systems for automated quiz generation.
- Applied debugging, validation systems, responsive UI design, and deployment workflows.

GitHappens Portfolio

- Designed and developed a personal engineering portfolio platform focused on software systems, projects, and technical growth.
- Implemented responsive layouts, modern UI styling, routing architecture, and reusable React components.
- Integrated project structure planning and scalable frontend organization.

Mortana (Planning Phase)

- Planning a C# WPF mortgage and real estate CRM using software engineering principles and MVVM architecture.
- Applying UML diagrams, SDLC workflows, requirements engineering, and database planning.
- Currently built main components in winforms, and being rebuilt with WPF.

Education

Centennial College — Software Engineering Technology (Advanced Diploma)

2024 – Present (2027 April Graduation)

GPA: 4.1

Relevant Experience

IT Project Manager — QROOZE

2021 – September 2024

- Acted as a technical liaison between leadership and third-party developers.
- Assisted with SQL database management, QA testing, and platform evaluations.
- Supported technical documentation, data analysis, and operational workflows.

Mortgage Agent & Real Estate Experience – Real Mortgage Associates & King Realty Inc

2020 – 2026 January

- Developed strong communication, analytical thinking, client management, and problem-solving skills through high-pressure client-facing environments.

Office Administrator – Re/Max Mississauga

2022 – 2024 September

- Worked as an administrator for a team of realtors and their team lead. Responsible for administering deals, working with realtors on setting appointments, using technologies such as TREB and docuSign
- Dealing with clients, and helping the team lead with any tasks required to keep the business running.

Concierge / Security Professional

2021– 2023 August

- Managed customer-facing interactions in high-traffic environments
- Coordinated incident reporting and communication
- Developed problem-solving and situational decision-making skills

Additional Information

Actively building and deploying software systems while continuously studying software engineering, data structures & algorithms, Linux systems, and full-stack application development. Long-term interests include scalable web systems, automation, AI-assisted tools, and game development.
